

2026 INDUSTRY

REVOLUTIONIZING THE FUTURE OF METAL CUTTING THROUGH INNOVATIVE SUSTAINABLE TECHNOLOGIES

"... Our products and services for metal cutting are transforming the future of digital factory by offering a wide range of solutions to improve the efficiency and automation of production processes: this holistic approach has actually consolidated Industry 4.0 standards and is helping to define the new horizons of Industry 5.0 through programming and management, control and monitoring software applications, exclusive cutting cycles and integration services."

MEP GROUP

We are specialized in the design and production of band and circular sawing machines for metal cutting that meet the most varied needs in the field of forming and chip removal of ferrous and non-ferrous materials.

Pioneer of digitalization in the sawing machine industry, the company has always attached the utmost importance to process automation in order to remain competitive in the market: **the wide range of sawing machines is made up of standard automation and digitalization solutions that can be enhanced with customized solutions according to customer needs.**

Moreover, as an all-round solutions provider, we offer **not only cutting-edge sawing machines and integrated services, but also high-tech peripheral devices and innovative accessories.**

"... Believing that digitalization is the key to remaining competitive in the market and improving the quality of products and services, our goal is to promote innovation and sustainable development by putting at the service of our customers solutions that integrate the knowledge gained during the digitalization process: actually, as part of our business strategy, we position ourselves as a pioneer in the digitalization of our processes and the continuous search for new technologies aimed at improving our efficiency, precision and productivity.

...

Digitalization, accelerated by the recent introduction of artificial intelligence, remains the beating heart of our operations, from the development and design of our products, to manufacturing and logistics, and we are convinced that the direct knowledge of digital technologies acquired through observation, use and daily practice is the differentiating element that allows us to perform best in the market by offering solutions suitable for every type of customer."

SHARK

THE WIDE RANGE OF BAND SAWING MACHINES

This type of sawing machines has been a revolution in the field of steel cutting because they allow the cutting of medium-large materials while maintaining a small footprint. The secret lies in the use of a band blade with variable teeth and a thickness ranging from 1mm to 3mm, thus allowing easier penetration and removal of the material and, at the same time, a proportionate structure of the machine. Thanks to all these characteristics, band sawing machines are extremely flexible in terms of both material sections and their toughness.

SEMI-AUTOMATIC

In this case, the operator must set the machine, load the material and position it to the desired size. The sawing machine will then perform the cutting cycle automatically. This type of machine is mainly aimed at those who need to cut medium-large series of various materials.

AUTOMATIC

The operator must set the machine, load the material and program it by entering the lengths to cut and the quantities. Some models require only the material loading since they are equipped with a software that, depending on the material, allows the auto-setting of both the machine and its cutting parameters. These models are also provided with the Kit Industry 4.0 Ready - IOT. Moreover, it is possible to develop customized solutions with automatic material loading/unloading systems.

SHARK 662 H KONNECT

MITER CUTTING • SOLID • TUBES • PROFILES • BEAMS

Electro-hydraulic automatic sawing machine with controlled automatic rotation for cutting solid sections, tubes, profiles and beams at angles ranging from -60° to $+60^{\circ}$. In addition to the automatic cutting cycle, it also features a semi-automatic cycle.

ABSOLUTE EFFICIENCY

- The Fast Approach system reduces cycle times thanks to the rapid, controlled approach of the cutting head to the workpiece, based on the material dimensions set in the work program.
- Automatic alignment of the front blade guide: it adjusts to the dimensions of the bars, enabling quick machine set-up when changing materials and ensuring that the blade guides are always correctly positioned.
- The steel supporting plane ensures stable and secure support for both individual bars and beds or bundles of bars. The sawing head rotates on the structure underneath rather than on the platform, ensuring fast and safe movements and keeping the working table fixed even when making angular cuts or cutting short pieces.
- The electromechanical servo system for dynamic blade tensioning allows for continuous and automatic adjustment, ensuring greater cutting precision and extending the blade's service life.

EXCEPTIONAL FLEXIBILITY

- The material library guides the operator step by step through the set-up of the main cutting parameters, automatically suggesting the optimal values. However, the system retains maximum flexibility, allowing the user to customise speeds and settings to suit specific requirements.
- Thanks to the integrated IIoT, the machine can be monitored and optimised in real time, allowing it to be quickly adapted to production requirements.
- The material clamping system is based on a tilting gantry system, using a potentiometric cutting vice on the loading side. An additional clamp on the unloading side and a vertical clamp on the loading side are both available as optional.
- The adaptive cutting force control system, which adjusts to the resistance encountered by the blade during cutting, ensures an excellent finish in all conditions, even when the tool is worn.
- The vector inverter for continuous adjustment of the blade rotation speed from 15 to 150 m/min allows efficient cutting of any type of material.

DESIGNED ESPECIALLY TO MEET THE NEEDS OF HEAVY-DUTY CONSTRUCTION PROFESSIONALS,
THIS SAW IS HIGHLY CUSTOMISABLE TO FIT INTO PRODUCTION CYCLES
AND SPECIFIC WORKING ENVIRONMENTS.

SUPERIOR PERFORMANCE

Ideal for cutting superalloys, high-strength steels and materials that have undergone surface treatments: the cast iron frame, the 9 kW motor and the 41 mm blade ensure excellent performance even when cutting hard materials.

MAXIMUM OPERATOR SAFETY

The sawing machine is supplied complete with modular perimeter guards including front light curtains and metal grill barriers. The guards can be customised to meet specific requirements.

HEAVY-DUTY MATERIAL FEEDING SYSTEM

The feeding system is available in 1500 mm and 3000 mm lengths, both in gantry or gripper versions, to suit specific cutting and material handling requirements. (1500mm extensions available on request)

10" PANEL PC - KONNECT TECHNOLOGY

Moving away from traditional PLC technology, the machine uses a Linux-based industrial PC, offering greater computing power, system integration and ease of updating, enabling it to adapt quickly to constantly evolving production requirements. The user interface, featuring a 10" touchscreen display and mechanical buttons, ensures guided and immediate operation. The result is a connected, digital sawing machine that can be fully integrated into the production line, designed to maximise process automation.

ADVANCED TECHNICAL SUPPORT

Our technical support service has been transformed thanks to native integration with IIoT technologies: we can intervene remotely directly on the machine control system, without requiring VPN connections, ensuring promptness, safety and operational continuity. Through our platform, the support team can monitor operating parameters in real time, send messages to the operator directly via the machine's control system, and provide the customer with proactive, personalised guidance.

MAXIMUM SAFETY

We offer a sawing machine that is up to date in every technical respect, from operator safety to energy efficiency, ensuring a strong and long-lasting investment.

Our solution, which is **ready for the new Machinery Regulation 2027**, is much more than just a sawing machine: it represents a promise of safety, reliability and peace of mind for customers and their operators.

→ Technical innovation and performance improvements:

- Performance brought up to the highest technical standards: compliance with the new Machinery Directive requires the integration of the latest and most reliable technologies.
- Improved ergonomics and operator interface: the new directive also requires more intuitive and safer interfaces, for the operator's benefit.
- Greater sustainability and reduced environmental impact: the new machines feature more efficient, energy-saving components that are easier to recycle.

→ Durability and value of the investment:

- Higher value over time: a capital asset that complies with future regulations retains its value better in the medium to long term.
- Long-term guarantee: a product designed in accordance with the latest standards is likely to remain on the market for longer, including for spare parts and technical support.

→ Management and administrative benefits:

- Less internal red tape: a system that is well-documented and compliant with the new standards makes internal audits and ISO certification easier.
- Easier access to incentives and tenders: this cutting solution, ready with the new Machinery Regulation 2023/1230, can facilitate access to public funds or subsidised loans.

→ Corporate image and responsibility

- A more modern and responsible corporate image: using machinery that is already compliant with the latest regulations strengthens the company's reputation.

HARDWARE PACKAGES

These include optional additional devices installed directly on the sawing machine, designed to monitor, optimise and protect the cutting cycle, thus improving the machine's performance and reliability.

→ OPTIMACUT

Designed to optimize every stage of the cutting process, this feature introduces advanced functionalities such as:

- **Auto-trimming**
- **Continuous progressive feeding**
- **Remnant recovery**

These operating principles enable optimal use of the material to be cut, minimize waste and ensure more efficient production.

→ DETECT

Enables real-time monitoring of key parameters to ensure the sawing machine is operating correctly.

The package may include:

- **Sensorless energy analysis system**
- **Hydraulic unit oil level sensor**
- **Hydraulic unit temperature sensor**
- **Coolant level sensor**

Ideal for high-volume production or multi-shift operations, it enables the prompt identification of any critical issues and simplifies preventive maintenance, thus improving efficiency and reliability.

SOFTWARE PACKAGES

These optional packages facilitate remote monitoring and management of processes, each offering specific features to meet different levels of control and operational requirements.

→ MEPLAN DESKTOP

Enables you to remotely program the work and manage production queues in a simple and intuitive way, with full access to the alarm history for effective diagnostics.

The system may include:

- Remote programming of jobs queues, which allows programs to be set and modified remotely, reducing machine downtime and increasing operational flexibility and efficiency. The LogFile enables the recording and tracking of events, parameters and machine faults, facilitating performance analysis, fault diagnosis and preventive maintenance.
- Bar optimiser, ideal for reducing material waste and optimising cutting surfaces, thus increasing production efficiency and reducing the operating costs of the sawing machine.
- Dashboard for real-time monitoring of key machine parameters, offering comprehensive and proactive control over the entire production process.
- Dashboard for real-time monitoring of energy consumption.

→ MEPLAN MOBILE

Designed for rapid and continuous monitoring, it provides real-time updates on the machine's status and allows you to view the alarm history with ease, all this in a click in your smartphone. Ideal for operators and managers who need immediate access to key information to keep production under control with ease, wherever they may be.

It may include:

- Dashboard for real-time monitoring of key machine parameters, offering comprehensive and proactive control over the entire production process.
- Alert notifications that keep you informed in real time of any faults or critical conditions, allowing you to take swift action and minimise machine downtime.

MEP's passionate team of designers and technical experts use the latest mechanical design software to be at the forefront of metal cutting technology and to choose the most innovative and advanced solutions to all possible needs in metal cutting.

DESIGN AND PRODUCTION OF CUSTOM CUTTING LINES

MEP's technical staff are able to design and build custom cutting machines and equipments to meet all possible needs.

DO YOU NEED A SAW?

WE MAKE YOUR OWN SAW!

SERVICE & SUPPORT

The Mep After Sale Service supports Customers with a range of services that for years have been one of the Company's excellence.

SPARE PARTS

Our technical staff is always ready to guarantee you the best assistance in the identification of the spare parts, even for machines out of production, and shipping by the fastest couriers within 24-72 hours after placing the order.

Moreover, storage and modern logistics ensure that our spare parts warehouse is constantly optimized in order to guarantee maximum availability.

MAINTENANCE PLANS

A regular maintenance has several benefits: less frequent failures and breakages, longer life of the sawing machine and its parts, more efficient system.

Find out which maintenance plan is the most suitable for your production needs or check if the maintenance KIT suitable for your sawing machine is available. Maximize efficiency to avoid any unpleasant events! Prevent expensive downtime by relying on the experience of our after sale service team.

TRAINING PLANS

Conceived for your MEP sawing machines or cutting lines: these cutting-edge courses are oriented to customers and workshop practice and they are about notions and practice directly on the machine!

Stand out from the competition by taking full advantage of the potential of your sawing machine!

OVERHAUL

Restore the efficiency of your sawing machine by improving productivity, cutting precision and safety.

INTEGRATIONS AND OPTIMIZATIONS

Upgrades to enhance the software version in use, along with the integrations needed to connect its parts with other systems, maximize the efficiency of your workshop by making the most of its potential.

OUR EXPERIENCE AND SUPPORT TO GRANT YOUR EFFICIENCY, ALWAYS!

AFTER SALES PROGRAM

Given the primary importance of Customer Satisfaction, particular attention has been paid to the management of the After Sales Service by a highly specialized internal staff that constantly interacts with quality control, Authorized Customer Service Centres, Sales Office and End Customers.
